Senior Software Engineer with 3+ years of experience building distributed systems, event-driven microservices, and enterprise workflow automation platforms. Proven track record of delivering measurable performance improvements at scale — from 1M+ daily transactions to 40% latency reductions — across Java/Spring Boot, React, Angular, Kafka, and AWS.

## Experience

### AgilePoint

SENIOR SOFTWARE ENGINEER

Bengaluru, India  
Apr 2026 – Present

- Contributing to the **core product team** developing an enterprise-grade **no-code workflow automation platform**, enabling organizations to build, automate, and orchestrate complex business processes.
- Designing and implementing **full-stack features** using **React** and **Spring Boot**, translating business requirements into scalable, maintainable, and production-ready solutions.
- Driving end-to-end feature development across frontend and backend systems, collaborating with cross-functional teams to enhance **platform capabilities, user experience, and system reliability**.

### Tata Consultancy Services (TCS) – TCS iON Digital Assessment Platform

PRODUCT ENGINEER

Mumbai, India  
Aug 2023 – Apr 2026

- Spearheaded **platform scalability to 1M+ daily assessment transactions** by decomposing the monolithic evaluation engine into **domain-driven microservices**, establishing clear service boundaries and enforcing idempotent REST interfaces for predictable request handling.
- Accelerated **system throughput by 35%** and eliminated workflow bottlenecks by orchestrating transition of core evaluation flows to a **distributed event-driven architecture**, leveraging Kafka/RabbitMQ with asynchronous message queues, consumer groups, and resilient dead-letter mechanisms.
- Reduced **database query latency by ~40%** and improved data throughput for 1M+ candidate records by restructuring workloads across **MySQL** and **MongoDB**, optimizing indexes, implementing read/write separation, and integrating **Redis**-based hot-cache layers.
- Increased **deployment reliability** by adopting immutable **Docker image builds**, standardizing environment parity, and enabling zero-downtime rolling deployments on **AWS EC2** through automated CI/CD pipelines.
- Reduced **response time by 25%** and strengthened operational security by refactoring core modules using scalable design patterns and implementing **RSA/AES encrypted logging** with automated key rotation.

## Technical Skills

|                      |                                                              |
|----------------------|--------------------------------------------------------------|
| Backend              | Java, Spring Boot, Node.js, Microservices, REST APIs         |
| Frontend             | React, Next.js, TypeScript                                   |
| Distributed Systems  | Kafka, RabbitMQ, Redis                                       |
| Data & Cloud         | MySQL, MongoDB, AWS, Docker, CI/CD                           |
| Software Engineering | System Design, Design Patterns, Data Structures & Algorithms |

## Projects

### Architect.io – AI-Powered System Design Platform

REACT, TYPESCRIPT, REACT FLOW, AI INTEGRATION

[designmysystem.netlify.app](#)

- Built an **AI-powered system design platform** that converts natural language requirements into interactive architecture diagrams.
- Engineered a visual canvas using **React Flow** for drag-and-drop modeling, component mapping, and real-time design updates.
- Designed a reusable node-based architecture supporting custom workflow components, dynamic edge relationships, and scalable diagram rendering.
- Integrated AI workflows for architecture generation and refinement, reducing manual system design effort.

### ByteBox – Cloud File Storage Platform

NEXT.JS, NODE.JS, MONGODB, TELEGRAM API, AWS

[gbytebox.vercel.app](#)

- Built a cloud file storage platform serving **100+ users** using the **Telegram Bot API** as a persistent storage layer.
- Reduced infrastructure costs by approximately **90%** through an innovative Telegram-backed storage architecture.
- Designed a hierarchical folder management system using **tree-based data structures** for efficient file organization and navigation.
- Implemented a Telegram-first storage workflow, differentiating the platform from traditional cloud file managers.

## Achievements

- Engineered a **real-time visitor analytics system** using an **event-driven streaming architecture**, securing **2nd Place at the GreenDeck Hackathon**.
- Lead App Developer at Google Developer Student Club (GDSC)** — Conducted **5+ hands-on bootcamps** and mentored **100+ students** in full-stack development and project implementation.

## Education

B.TECH — COMPUTER SCIENCE & ENGINEERING  
University Institute of Technology RGPV

CGPA: 8.20  
May 2019 – Jun 2023
